Metivo™

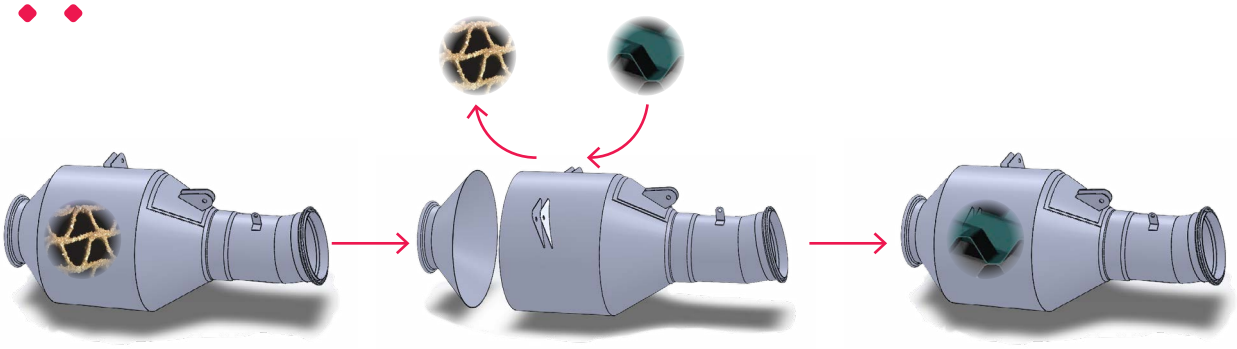
Part of BASF Group

Take off with UpCore™

Give your converter a new life. Airbus recommends airlines to UpCore™ A320 Series Ozone Converters to VOZC Converters

https://metivo.com/en/catalysts/aerospace/vozc

Airlines are increasingly facing higher maintenance costs, flight delays and potential diversions due to cabin odor issues and fume events, caused by Volatile Organic Compounds (VOCs). Metivo™, Part of BASF Group, addresses these challenges with UpCore™, a cost-effective and sustainable upgrade that replaces existing catalyst cores with Airbus-approved VOZC technology. Proven to reduce no fault found maintenance by at least 65 percent, Metivo's VOZC technology helps airlines lower maintenance costs, improve fleet availability, and mitigate fume events that can cost $200,000 to $300,000 in lost revenue, maintenance, and delays. By eliminating unpleasant odors, UpCore™ also creates a cleaner, more comfortable environment for passengers and crew, helping airlines enhance the onboard experience while protecting their brand reputation. UpCore™ is a standard procedure that Metivo™ has been performing for years.

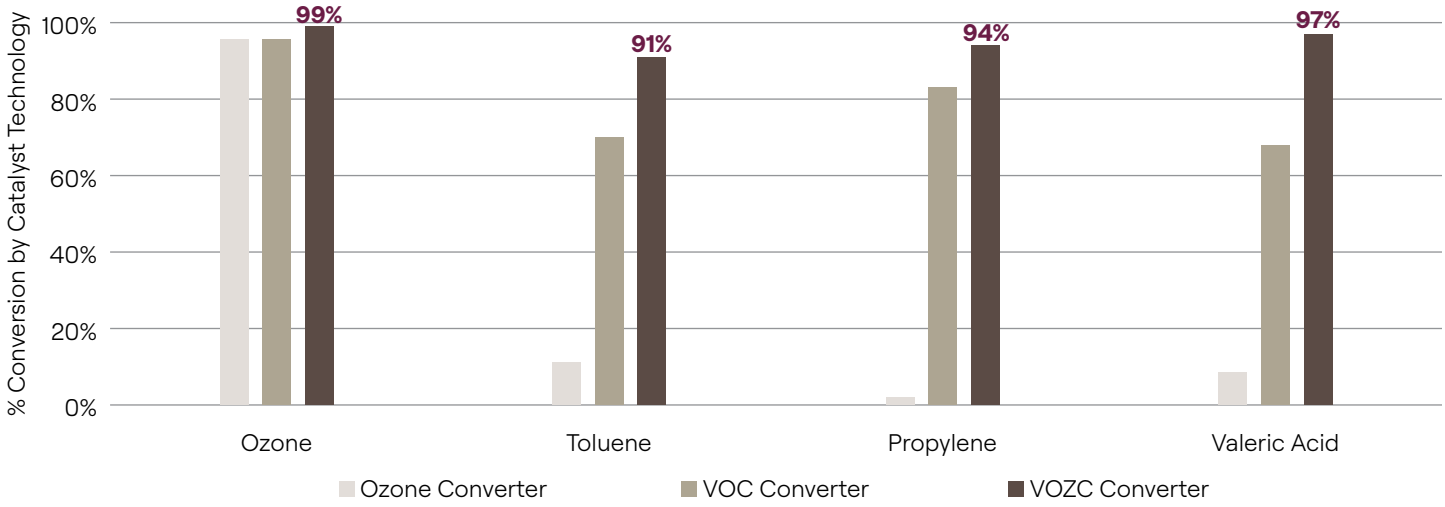


Ship your current A320 units and spares.

Our experts will replace the catalyst and weld the unit back together.

Airlines receive their same unit back with factory new reset, new part number, and full OEM warranty.

Metivo™, Part of BASF Group, VOCZ Outperforms All Known Aviation Catalyst Technologies



Your Benefits with UpCore™

- **Seamless, cost-effective and sustainable** upgrade from ozone-only converter to Airbus approved Ozone-VOC or enhanced VOZC catalyst technology by reusing the existing housing.
- Ozone-VOC and VOZC converters mitigate **odor causing hydrocarbons** while retaining the necessary **compliant ozone conversion** function of standard ozone-only converters.
- Improve aircraft **operational reliability** and **passenger/flight crew comfort** by reducing odors entering the cabin.
- Reset converter performance to OEM factory-new state of an Ozone-VOC converter that utilizes the **same OEM part number** as a factory-new part without the need of a STC or DER. OEM equipment will meet leasing company requirements.
- Next generation VOZC converter technology offers a **step-change improvement** across a wide array of VOCs, **removing 97 percent of the most unpleasant odor-causing VOCs (valeric acid)** in the bleed air entering the cabin.
- **Over 30 years in OEM MRO Service expertise** that ensures confidence in converter performance.
